Hello

I'm a front-end developer building client-side applications with Backbone and Angular.

My technical work involves all types of front-end tasks from implementing designs to configuring the client-side build process. Coming from a full-stack background I am also aware of server-side implementation issues, databases and deployment.

Experience

JavaScript, Backbone, Angular, jQuery, Sass, Grunt, Responsive Design, Git, Analytics

- Feb '14 – May '14 **Orange** *Backbone, Protractor, XMPP/Strophe, Voip/Jssip*
Worked on Html5 Voip and messaging app called Libon. Wrote and optimised automated E2E tests, reviewed code and contributed to feature development as well as debugging cross-browser issues.
- Apr '14 – Dec '14 **Shufflehub** *Angular, Sass, Mixpanel, Mobile Performance Optimization*
Built front-end for online shopping aggregator, using CSS3 and inline SVGs. Implemented analytics reports to track customer acquisition and feature discoverability.
- Jan '14 – Apr '14 **Sportlobster** *Backbone, Require.js, Mustache, Less, PHP*
Worked on responsive website for VC backed social network startup. Helped reduce actual and perceived page load time and implemented onboarding tutorial.
- Jul '13 – Oct '13 **Solid State Group** *Backbone, Sass, Mustache, Open Graph Protocol*
Developed UI components for single-page social networking app.
- Mar '13 – Oct '13 **Cytora** *Python, Google Maps, CartoDB*
Visualizations, data import and mapping of political risk data.
- Feb '12 – Oct '12 **Cabfix** *jQuery, PHP/CodeIgniter, MySQL*
Worked on cab booking UI, analytics for business users and internal monitoring tools.
- In Between **Client and Digital Agency Projects** *Angular, Backbone, PHP, Python/Flask*
Digital Agencies: Imagination, Possible, AIS, Head London and 1000 Heads.
Developed Angular application giving musicians feedback on their marketing skills. Automated generation of feedback emails and integrated PhantomJS for SEO.
Created Angular UI for learning platform, comprising chat and student activities.
Implemented on-page analytics tracking and Facebook/Adwords conversion tracking.
Built multi-vendor marketplace integrating with the website CMS and Paypal.

Additional Projects and Open Source

- Talks User group presentations on CSS architecture, developer tools and website scraping.
- vAnnotate Code visualisation program to capture a program's state during execution. Acts as static file server that injects logging instructions when serving JavaScript code.
- Open Source Fixes for Ember Data, MongoEngine and more. Feature work on grunt plugins.
- Personal HTML5 Android App, websites with Node and Google App Engine.
